

Centennial License Manager™ from FrontRange Solutions®

The Simple Answer in Software License Management

For many companies, software licensing raises a lot of questions. How many applications are currently in use? How many entitlements are available? Can compliance be substantiated when the time comes?

Centennial License Manager™ from FrontRange Solutions® eliminates the guesswork. This web-based application radically simplifies the task of collecting license information, matching discovered software against vendor SKUs to ensure that software entitlements match actual software installations. For companies focused on avoiding the cost of over-licensing, eliminating the risk and embarrassment of under-licensing, and better managing a sprawling software estate, Centennial License Manager is the answer.

Simple Software Management

Centennial License Manager provides visibility and detail across the software estate, helping IT teams manage software assets more efficiently and drive down software-related costs. It simplifies the process, which begins with having up-to-date information.

Improved visibility

Centennial License Manager makes it easy to get clear, organized information of all installed software applications across the network. The entire software environment is brought into focus.

Reduced licensing costs

With accurate information to reconcile usage versus entitlements, inflated maintenance agreements and unnecessary

license purchases can be prevented, potentially saving tens or hundreds of thousands of dollars per year.

Better compliance reporting

Compliance can be demonstrated quickly and accurately with detailed reports, reducing the risk of failing a software license audit.

Improved governance

Software assets can be managed more efficiently across the lifecycle, from procurement to deployment to disposal. A complex, ever-shifting software environment can now be brought under control.

The Power of Automation

Centennial License Manager includes productivity tools to streamline every aspect of how software licenses are recorded, managed, and maintained.

Automatic data import

Information is imported directly from Centennial Discovery®, which discovers all IP-addressable hardware, software, and devices on the network to build a complete database of the IT estate. Information on licensable software is transferred seamlessly to Centennial License Manager without requiring a third-party application to convert or cleanse the data.

Automatic filtering

Centennial License Manager imports only licensable applications into its software inventory, so only relevant data is presented to software managers.

FrontRange Modules and Solutions

Centennial Discovery®

Automated discovery and inventory engine. Identifies, scans, and reports detailed configuration information for all IT infrastructure assets, including the network, PCs, servers, software, printers, and mobile devices.

FrontRange™ SAM Essentials™

A complete documented workflow, process map, and training solution for end-to-end SAM implementation according to industry best practices. Ensures that Centennial Discovery and Centennial License Manager are used to greatest effect.

FrontRange™ Service Management

Features nine ITIL® compatible modules for end-to-end IT service lifecycle management. Combines self-service functionality with advanced telephony to automate and accelerate IT service delivery.

HEAT® Service and Support

Help desk solution with incident and inquiry tracking, case management, automation tools, advanced telephony, self-service functions, knowledge management, and mobile service desk.

Enteo®

Client lifecycle management provides fully-automated infrastructure tools, like automated software configuration management and policy-based compliance monitoring. Enteo proactively manages and optimizes an ever-changing IT environment.

FrontRange DeviceWall™

Protects data on and off the network. Prevents file transfers to unauthorized portable devices, automatically encrypts data copied to approved devices, and provides a complete audit trail.

Microsoft Corporation	Office Small Business Edition 2003 German	17 Nov 2003	1	1		[P]	[E]

Centennial License Manager™ is a web-based application that integrates seamlessly with Centennial Discovery® to radically simplify the task of collecting license information, then matching it against discovered software and vendor SKUs. Information is taken from Centennial Discovery into the Software Inventory, where it can be reconciled to create a compliance position.

Automatic SKU validation

All captured license information is automatically validated against an online database of known software from major vendors. This ensures that the entered information matches a vendor's official license catalog. Centennial License Manager is the only solution on the market today that automates this labor-intensive task.

Automatic best-fit reconciliation

Specific entitlements in a repository are dynamically matched to actual licenses in use across the network. Centennial License Manager finds the best fit between entitlements and actual licenses, reporting the optimal compliance position for the organization. Compliance is achieved in the most cost-effective way.

Simplify Management and Gain Productivity

Centennial License Manager is designed to simplify and accelerate the complex business of software license management. It's essential

technology for increasing productivity and reducing risk in a distributed enterprise.

Multi-user wizards

Data entry is vastly improved with wizards to ensure that the correct license information is captured in a consistent way. Wizards are role-based, providing data entry users and software managers appropriate access.

Upgrade and downgrade rights management

Centennial License Manager automatically recognizes and calculates upgrade and downgrade rights, enabling the best use of available licenses.

Centralized site management

Software licenses across satellite offices, departments, and organizational units are managed with a single system, reducing management time and complexity while allowing more control over new software purchases.

Efficient reporting

Licensing statements and other forms can be populated with live data from Centennial License Manager, so accurate reports can be generated quickly.

An End-to-End Solution

Centennial License Manager is transparently integrated with Centennial Discovery as part of the FrontRange™ Software Asset Management Suite™ (FrontRange™ SAM Suite™). Its functionality can be extended with applications such as FrontRange™ IT Service Management, HEAT®, and Enteo® solutions.
